

	Y12 AEC	Y12 DHN	Y13 DHN	Y13 KMF
<b>Week 1 (w/b Wed 7<sup>th</sup> Sep)</b>	<p><u>Lesson 1: 2.1.1</u> - (a) isotopes as atoms of the same element with different numbers of neutrons and different masses (b) atomic structure in terms of the numbers of protons, neutrons and electrons for atoms and ions, given the atomic number, mass number and any ionic charge</p> <p><u>Lesson 2: 2.1.1</u> – (c) explanation of the terms <i>relative isotopic mass</i> (mass compared with 1/12th mass of carbon-12) and <i>relative atomic mass</i> (weighted mean mass compared with 1/12th mass of carbon-12), based on the mass of a <sup>12</sup>C atom, the standard for atomic masses</p> <p><u>Lesson 3: 2.1.1</u> - (e) use of the terms <i>relative molecular mass</i>, <i>M<sub>r</sub></i>, and <i>relative formula mass</i> and their calculation from relative atomic masses.</p> <p><u>Lesson 4: 2.1.1</u> - (d) use of mass spectrometry in: (i) the determination of relative isotopic masses and relative abundances of the isotope, (ii) calculation of the relative atomic mass of an element from the relative abundances of its isotopes</p>	<p><u>Lesson 1: 4.1.1</u> - (a) application of IUPAC rules of nomenclature for systematically naming organic compounds</p> <p><u>Lesson 2: 4.1.1</u> – as Lesson 1</p>	<p><u>Lesson 1: 5.1.1</u> - (a) explanation and use of the terms: <i>rate of reaction</i>, <i>order</i>, <i>overall order</i>, <i>rate constant</i>, <i>half-life</i>, <i>rate-determining step</i></p> <p><u>Lesson 2: 5.1.1</u> - (a) explanation and use of the terms: <i>rate of reaction</i>, <i>order</i>, <i>overall order</i>, <i>rate constant</i>, <i>half-life</i>, <i>rate-determining step</i></p> <p><u>Lesson 3: 5.1.1</u> - (b) deduction of: (i) orders from experimental data (ii) a rate equation from orders of the form: <math>\text{rate} = k[\text{A}]^m[\text{B}]^n</math>, where <i>m</i> and <i>n</i> are 0, 1 or 2</p> <p><u>Lesson 4: 5.1.1</u> - (c) calculation of the rate constant, <i>k</i>, and related quantities, from a rate equation including determination of units</p>	<p><u>Lesson 1: 6.1.1</u> - (a) the comparison of the Kekulé model of benzene with the subsequent delocalised models for benzene in terms of p-orbital overlap forming a delocalised π-system</p> <p>6.1.1 - (b) the experimental evidence for a delocalised, rather than Kekulé, model for benzene in terms of bond lengths, enthalpy change of hydrogenation and resistance to reaction <b>(see also 6.1.1 f)</b></p> <p><u>Lesson 2: 6.1.1</u> - (c) use of IUPAC rules of nomenclature for systematically naming substituted aromatic compounds</p> <p><u>Lesson 3: 6.1.1</u> - (d) the electrophilic substitution of aromatic compounds with: (i) concentrated nitric acid in the presence of concentrated sulfuric acid (ii) a halogen in the presence of a halogen carrier (iii) a haloalkane or acyl chloride in the presence of a halogen carrier (Friedel–Crafts reaction) and its importance to synthesis by formation of a C–C bond to an aromatic ring <b>(see also 6.2.4 d)</b></p>
<b>Key Words</b> Level 2 Level 3	Atomic number, isotope, neutron, proton, electron, relative abundance, relative atomic mass, relative isotopic mass, relative molecular mass	Hydrocarbon, homologous series, alkane, alkene, alkyl, alicyclic, saturated, unsaturated, isomer/ism, Structural isomer, organic compound, displayed/structural/skeletal molecular formula(e)	rate of reaction, order, overall order, rate constant, half-life, rate-determining step, Arrhenius equation, tangent, gradient	Delocalised, aromatic, electron density, Electron donating, electron withdrawing,
<b>Common Misconceptions</b>	I'd expect some confusion about +/- ion formation at this stage	Naming conventions can be tricky to get used to – build slowly, don't overcomplicate too quickly	Calculating order based on results can be problematic if the question uses non-whole number orders – this should not really be present but older questions do have them	Curly arrow direction, formation of the + charge and drawing the horseshoe correctly
<b>Homework</b>	Task suitable to ability of group	Task suitable to ability of group.	Task suitable to ability of group.	Task suitable to ability of group.
<b>Assessment this half-term</b>	Up to & inc. 2.1.2	Up to & inc. 4.1.1h	Up to & inc. 5.1.1k	Up to & inc. 6.1.1l
<b>Career opportunities</b> <b>Employment Links</b>	LIFE SKILLS: EMPLOYMENT: <a href="https://nationalcareers.service.gov.uk/job-profiles/research-scientist">https://nationalcareers.service.gov.uk/job-profiles/research-scientist</a>	LIFE SKILLS: EMPLOYMENT: <a href="https://edu.rsc.org/job-profiles/analytical-technician-plastics/4010921.article">https://edu.rsc.org/job-profiles/analytical-technician-plastics/4010921.article</a>	LIFE SKILLS: EMPLOYMENT: <a href="https://nationalcareers.service.gov.uk/job-profiles/chemical-engineer">https://nationalcareers.service.gov.uk/job-profiles/chemical-engineer</a>	LIFE SKILLS: EMPLOYMENT: <a href="https://nationalcareers.service.gov.uk/job-profiles/biochemist">https://nationalcareers.service.gov.uk/job-profiles/biochemist</a>

<b>Week 2 (w/b 12<sup>th</sup> Sep)</b>	<p><u>Lesson 1: 2.1.2</u> - (a) the writing of formulae of ionic compounds from ionic charges, including: (i) prediction of ionic charge from the position of an element in the periodic table (ii) recall of the names and formulae for the following ions: NO<sub>3</sub><sup>-</sup>, CO<sub>3</sub><sup>2-</sup>, SO<sub>4</sub><sup>2-</sup>, OH<sup>-</sup>, NH<sub>4</sub><sup>+</sup>, Zn<sup>2+</sup> and Ag<sup>+</sup></p> <p><u>Lesson 2: 2.1.2</u> - (a) the writing of formulae of ionic compounds from ionic charges, including: (i) prediction of ionic charge from the position of an element in the periodic table (ii) recall of the names and formulae for the following ions: NO<sub>3</sub><sup>-</sup>, CO<sub>3</sub><sup>2-</sup>, SO<sub>4</sub><sup>2-</sup>, OH<sup>-</sup>, NH<sub>4</sub><sup>+</sup>, Zn<sup>2+</sup> and Ag<sup>+</sup></p>	<p><u>Lesson 1: 4.1.1</u> - (b) interpretation and use of the terms: (i) <i>general formula</i> (the simplest algebraic formula of a member of a homologous series) e.g. for an alkane: C<sub>n</sub>H<sub>2n+2</sub> (ii) structural formula (the minimal detail that shows the arrangement of atoms in a molecule) e.g. for butane: CH<sub>3</sub>CH<sub>2</sub>CH<sub>2</sub>CH<sub>3</sub> or CH<sub>3</sub>(CH<sub>2</sub>)<sub>2</sub>CH<sub>3</sub> (iii) <i>displayed formula</i> (the relative positioning of atoms and the bonds between them) (iv) <i>skeletal formula</i> (the simplified organic formula, shown by removing hydrogen atoms from alkyl chains, leaving just a carbon skeleton and associated functional groups)</p>	<p><u>Lesson 1: 5.1.1</u> - (c) calculation of the rate constant, <i>k</i>, and related quantities, from a rate equation including determination of units</p> <p><u>Lesson 2: 5.1.1</u> - (d) from a concentration–time graph: (i) deduction of the order (0 or 1) with respect to a reactant from the shape of the graph (ii) calculation of reaction rates from the measurement of gradients <b>(see also 3.2.2 b)</b></p> <p><u>Lesson 3: 5.1.1</u> - (d) from a concentration–time graph: (i) deduction of the order (0 or 1) with respect to a reactant from the shape of the graph (ii) calculation of reaction rates from the measurement of gradients <b>(see also 3.2.2 b)</b></p>	<p><u>Lesson 1: 6.1.1</u> - (e) the mechanism of electrophilic substitution in arenes for nitration and halogenation <b>(see also 4.1.1 h–i)</b></p> <p><u>Lesson 2: 6.1.1</u> - (f) the explanation of the relative resistance to bromination of benzene, compared with alkenes, in terms of the delocalised electron density of the π-system in benzene compared with the localised electron density of the π-bond in alkenes <b>(see also 4.1.3 a, 6.1.1 a)</b></p> <p><u>Lesson 3: 6.1.1</u> - (g) the interpretation of unfamiliar electrophilic substitution reactions of aromatic compounds, including prediction of mechanisms</p>

	<p><u>Lesson 3: 2.1.2</u> – (b) construction of balanced chemical equations (including ionic equations), including state symbols, for reactions studied and for unfamiliar reactions given appropriate information.</p> <p><u>Lesson 4: 2.1.2</u> – (b) construction of balanced chemical equations (including ionic equations), including state symbols, for reactions studied and for unfamiliar reactions given appropriate information.</p>	<p><u>Lesson 2: 4.1.1</u> - (c) interpretation and use of the terms: (i) <i>homologous series</i> (a series of organic compounds having the same functional group but with each successive member differing by CH<sub>2</sub>) (ii) <i>functional group</i> (a group of atoms responsible for the characteristic reactions of a compound) (iii) <i>alkyl group</i> (of formula C<sub>n</sub>H<sub>2n+1</sub>) (iv) <i>aliphatic</i> (a compound containing carbon and hydrogen joined together in straight chains, branched chains or non-aromatic rings) (v) <i>alicyclic</i> (an aliphatic compound arranged in non-aromatic rings with or without side chains) (vi) <i>aromatic</i> (a compound containing a benzene ring) (vii) <i>saturated</i> (single carbon–carbon bonds only) and <i>unsaturated</i> (the presence of multiple carbon–carbon bonds, including C=C, C≡C and aromatic rings)</p>	<p><u>Lesson 4: 5.1.1</u> - (e) from a concentration–time graph of a first order reaction, measurement of constant half-life, <math>t_{1/2}</math></p>	
<p><b>Key Words</b> Level 2 Level 3</p>	<p>Mass spectrometer/y, relative isotopic mass, compound ion, state symbol, nitrate, sulfate, phosphate, hydroxide</p>	<p>Hydrocarbon, homologous series, alkane, alkene, alkyl, alicyclic, saturated, unsaturated, isomer/ism, Structural isomer, organic compound, displayed/structural/skeletal molecular formula(e)</p>	<p>rate of reaction, order, overall order, rate constant, half-life, rate-determining step, Arrhenius equation, tangent, gradient, instantaneous</p>	<p>Delocalised, aromatic, electron density, Electron donating, electron withdrawing,</p>
<p><b>Common Misconceptions</b></p>	<p>Understanding of compound ions as discrete, whole units, and treating them as such</p>	<p>Naming from the wrong end, missing the longest chain due to branching</p>		<p>Correctly identifying ortho/meta/para position and which groups cause substitution in which place</p>
<p><b>Homework</b></p>	<p>Task suitable to ability of group.</p>	<p>Task suitable to ability of group.</p>	<p>Task suitable to ability of group.</p>	<p>Task suitable to ability of group.</p>
<p><b>Assessment this half-term</b></p>	<p>Up to &amp; inc. 2.1.2</p>	<p>Up to &amp; inc. 4.1.1h</p>	<p>Up to &amp; inc. 5.1.1k</p>	<p>Up to &amp; inc. 6.1.1l</p>

<b>Week 5 (w/b 3<sup>rd</sup> Oct)</b>	Lesson 1: 2.1.3. (d) the terms <i>anhydrous, hydrated</i> and <i>water of crystallisation</i> and calculation of the formula of a hydrated salt from given percentage composition, mass composition or based on experimental results Lesson 2: 2.1.3. (e) calculations, using amount of substance in mol, involving: (i) mass (ii) gas volume (iii) solution volume and concentration Lesson 3: Assessment Lesson 4: Exemplars		Lesson 1: 4.1.1 - (h) a 'curly arrow' described as the movement of an electron pair, showing either heterolytic fission or formation of a covalent bond Lesson 2: 4.1.1 - (i) reaction mechanisms, using diagrams, to show clearly the movement of an electron pair with 'curly arrows' and relevant dipoles.		Lesson 1: 5.1.1 (k) the Arrhenius equation: (i) the exponential relationship between the rate constant, $k$ and temperature, $T$ given by the Arrhenius equation, $k = Ae^{-E_a/RT}$ (ii) determination of $E_a$ and $A$ graphically using: $\ln k = -E_a/RT + \ln A$ derived from the Arrhenius equation. Lesson 2: 5.1.1 (k) the Arrhenius equation: (i) the exponential relationship between the rate constant, $k$ and temperature, $T$ given by the Arrhenius equation, $k = Ae^{-E_a/RT}$ (ii) determination of $E_a$ and $A$ graphically using: $\ln k = -E_a/RT + \ln A$ derived from the Arrhenius equation. Lesson 3: Assessment Lesson 4: Exemplars		Lesson 1: Exemplars Lesson 2: Feedback Lesson 3: Re-test
<b>Key Words</b> Level 2 Level 3	Mole, balancing, Avogadro's Constant, ideal gas,		Curly arrow, reaction mechanism, substitution reaction		rate of reaction, order, overall order, rate constant, half-life, rate-determining step, Arrhenius equation, tangent, gradient, instantaneous		Delocalised, aromatic, electron density, Electron donating, electron withdrawing,
<b>Common Misconceptions</b>

<b>Week 10 (w/b 14<sup>th</sup> Nov)</b>	Lesson 1: PAG2 Lesson 2: PAG2 Lesson 3: 2.1.5. (a) rules for assigning and calculating oxidation number for atoms in elements, compounds and ions Lesson 4: 2.1.5. (b) writing formulae using oxidation numbers		Lesson 1: 4.1.2. (f) the reaction of alkanes with chlorine and bromine by radical substitution using ultraviolet radiation, including a mechanism involving homolytic fission and radical reactions in terms of initiation, propagation and termination (see also 4.1.1 f–g) (g) the limitations of radical substitution in synthesis by the formation of a mixture of organic products, in terms of further substitution and reactions at different positions in a carbon chain. Lesson 2: 4.1.2. (g) the limitations of radical substitution in synthesis by the formation of a mixture of organic products, in terms of further substitution and reactions at different positions in a carbon chain.		Lesson 1: Exemplars Lesson 2: Feedback Lesson 3: 5.1.2. (f) (i) the qualitative effect on equilibrium constants of changing temperature for exothermic and endothermic reactions (ii) the constancy of equilibrium constants with changes in concentration, pressure or in the presence of a catalyst Lesson 4: 5.1.2. (g) explanation of how an equilibrium constant controls the position of equilibrium on changing concentration, pressure and temperature		Lesson 1: Exemplars Lesson 2: Feedback Lesson 3: 6.1.3. (a) explanation of the water solubility of carboxylic acids in terms of hydrogen bonding	
<b>Key Words</b> Level 2 Level 3	Oxidation, reduction, redox		Radical, initiation, propagation, termination, addition, heterolytic, homolytic, isomerism, electrophile, primary, secondary, tertiary		Equilibrium, homogeneous, heterogeneous, mole fraction, partial pressure		Bronsted-Lowry, acid, base, hydrolysis, esterification	
<b>Common Misconceptions</b>	Treating this as just a mathematical operation will get you so far, but linking it to electronegativity can help make sense of why it's happening.		Determining which species is formed at the propagation stage, and how these propagate and terminate through these stages		Constant value of $K_c$ can be confusing, particularly where pressure is concerned

<b>Week 11 (w/b 21<sup>st</sup> Nov)</b>	Lesson 1: 2.1.5. (c) use of a Roman numeral to indicate the magnitude of the oxidation number when an element may have compounds/ions with different oxidation numbers Lesson 2: 2.1.5. (d) oxidation and reduction in terms of: (i) electron transfer (ii) changes in oxidation number Lesson 3: 2.1.5. (e) redox reactions of metals with acids to form salts, including full equations (see also 2.1.4 c) Lesson 4: 2.1.5. (f) interpretation of redox equations in (e), and unfamiliar redox reactions, to make predictions in terms of oxidation numbers and electron loss/gain.		Lesson 1: Revise Lesson 2: Test		Lesson 1: 5.1.2. (h) application of the above principles in 5.1.2 How far? for $K_c$ , $K_p$ to other equilibrium constants, where appropriate (see also 5.1.3 c etc.). Lesson 2: 5.1.2. (h) application of the above principles in 5.1.2 How far? for $K_c$ , $K_p$ to other equilibrium constants, where appropriate (see also 5.1.3 c etc.). Lesson 3: 5.1.3. (a) (i) a Brønsted–Lowry acid as a species that donates a proton and a Brønsted–Lowry base as a species that accepts a proton (see also 2.1.4 Acids) (ii) use of the term <i>conjugate acid–base pairs</i> (iii) monobasic, dibasic and tribasic acids		Lesson 1: 6.1.3. (b) reactions in aqueous conditions of carboxylic acids with metals and bases (including carbonates, metal oxides and alkalis) Lesson 2: 6.1.3. (b) reactions in aqueous conditions of carboxylic acids with metals and bases (including carbonates, metal oxides and alkalis) Lesson 3: 6.1.3. (c) esterification of: (i) carboxylic acids with alcohols in the presence of an acid catalyst (e.g. concentrated $H_2SO_4$ ) (ii) acid anhydrides with alcohols	

			Lesson 4: 5.1.3. (b) the role of H <sup>+</sup> in the reactions of acids with metals and bases (including carbonates, metal oxides and alkalis), using ionic equations (see also 2.1.4 c, 2.1.5 e)	
<b>Key Words</b> Level 2 Level 3	Oxidation, reduction, redox		Equilibrium, homogeneous, heterogeneous, mole fraction, partial pressure Bronsted-Lowry, acid, base, buffer, conjugate, end point, equivalence point, ionic equation	Bronsted-Lowry, acid, base, hydrolysis, esterification

<b>Foundation</b>	Y12 AEC	Y12 DHN	Y13 DHN	Y13 KMF
<b>Week 16 (w/b Wed 4<sup>th</sup> Jan)</b>	Lesson 1: 2.2.2. (f) use of the term <i>average bond enthalpy</i> as a measurement of covalent bond strength Lesson 2: 2.2.2. (g) the shapes of, and bond angles in, molecules and ions with up to six electron pairs (including lone pairs) surrounding the central atom as predicted by electron pair repulsion, including the relative repulsive strengths of bonded pairs and lone pairs of electrons Lesson 3: 2.2.2. (h) electron pair repulsion to explain the following shapes of molecules and ions: linear, non-linear, trigonal planar, pyramidal, tetrahedral and octahedral Lesson 4: 2.2.2. (i) electronegativity as the ability of an atom to attract the bonding electrons in a covalent bond; interpretation of Pauling electronegativity values	Lesson 1: 4.1.3. (e) the reactivity of alkenes in terms of the relatively low bond enthalpy of the $\pi$ -bond Lesson 2: 4.1.3 (f) addition reactions of alkenes with: (i) hydrogen in the presence of a suitable catalyst, e.g. Ni, to form alkanes (ii) halogens to form dihaloalkanes, including the use of bromine to detect the presence of a double C=C bond as a test for unsaturation in a carbon chain (iii) hydrogen halides to form haloalkanes (iv) steam in the presence of an acid catalyst, e.g. H <sub>3</sub> PO <sub>4</sub> , to form alcohols (g) definition and use of the term <i>electrophile</i> (an electron pair acceptor) (h) the mechanism of electrophilic addition in alkenes by heterolytic fission ( <b>see also 4.1.1 h-i</b> )	Lesson 1: PAG11 Lesson 2: PAG11 Lesson 3: 5.2.1. (a) explanation of the term <i>lattice enthalpy</i> (formation of 1 mol of ionic lattice from gaseous ions, $\Delta_{LE}H$ ) and use as a measure of the strength of ionic bonding in a giant ionic lattice ( <b>see also 2.2.2 b-c</b> ) Lesson 4: 5.2.1. (b) use of the lattice enthalpy of a simple ionic solid (i.e. NaCl, MgCl <sub>2</sub> ) and relevant energy terms for: (i) the construction of Born-Haber cycles (ii) related calculations	Lesson 1: 6.2.3. (a) condensation polymerisation to form: (i) polyesters (ii) polyamides Lesson 2: 6.2.3. (a) condensation polymerisation to form: (i) polyesters (ii) polyamides Lesson 3: 6.2.3. (b) the acid and base hydrolysis of: (i) the ester groups in polyesters (ii) the amide groups in polyamides
<b>Key Words</b> Level 2 Level 3	Enthalpy, bonding pair, lone pair, dative covalent bond, intermolecular forces, dipole, dispersion, polar, non-polar, electronegativity, enthalpy	addition, heterolytic, homolytic, isomerism, electrophile, primary, secondary, tertiary, CIP, Markownikoff	Enthalpy, lattice enthalpy, enthalpy of formation, enthalpy of combustion, enthalpy of solution, Born-Haber cycle, electron affinity,	Condensation, polymerisation, monomer, esterification, repeating unit, hydrolysis
<b>Common Misconceptions</b>		Curly arrows, conservation of charge at each stage	When calculating LE from a Born-Haber cycle remember that it is clockwise from elements = anticlockwise from elements. Attention to detail can be an issue – signs, state symbols, number of moles all need to be correct	
<b>Homework</b>	Activelearn task suitable to ability of group	Activelearn task suitable to ability of group.	Activelearn task suitable to ability of group.	Activelearn task suitable to ability of group.
<b>Assessment this half-term</b>	Up to & inc. 2.2.2o	Up to & inc. 4.1.3k	Up to & inc. 5.2.2k	Up to & inc. 6.2.4d

<b>Week 19 (w/b 23<sup>rd</sup> Jan)</b>	<u>Lesson 1: Feedback</u> <u>Lesson 2: Re-test</u> <u>Lesson 3: 3.1.1</u> - (a) the periodic table as the arrangement of elements: (i) by increasing atomic (proton) number (ii) in periods showing repeating trends in physical and chemical properties (periodicity) (iii) in groups having similar chemical properties (b) (i) the periodic trend in electron configurations across Periods 2 and 3 (see also 2.2.1 d) (ii) classification of elements into s-, p- and d-blocks <u>Lesson 4: 3.1.1</u> - (c) first ionisation energy (removal of 1 mol of electrons from 1 mol of gaseous atoms) and successive ionisation energy, and: (i) explanation of the trend in first ionisation energies across Periods 2 and 3, and down a group, in terms of attraction, nuclear charge and atomic radius (ii) prediction from successive ionisation energies of the number of electrons in each shell of an atom and the group of an element	<u>Lesson 1: Assessment</u> <u>Lesson 2: Feedback</u>	<u>Lesson 1: 5.2.2.</u> (h) calculation of a standard cell potential by combining two standard electrode potentials (i) prediction of the feasibility of a reaction using standard cell potentials and the limitations of such predictions in terms of kinetics and concentration <u>Lesson 2: 5.2.2.</u> (j) application of principles of electrode potentials to modern storage cells (k) explanation that a fuel cell uses the energy from the reaction of a fuel with oxygen to create a voltage and the changes that take place at each electrode. <u>Lesson 3: 5.2.2.</u> (j) application of principles of electrode potentials to modern storage cells (k) explanation that a fuel cell uses the energy from the reaction of a fuel with oxygen to create a voltage and the changes that take place at each electrode. <u>Lesson 4: Assessment</u>	<u>Lesson 1: 6.2.4.</u> (c) reaction of nitriles from (b): (i) by reduction (e.g. with H <sub>2</sub> /Ni) to form amines (ii) by acid hydrolysis to form carboxylic acids <u>Lesson 2: 6.2.4.</u> (d) formation of a substituted aromatic C–C by alkylation (using a haloalkane) and acylation (using an acyl chloride) in the presence of a halogen carrier (Friedel–Crafts reaction) (see also 6.1.1 d). <u>Lesson 3: Assessment</u>
<b>Key Words</b> Level 2 Level 3	Electron configuration, ionisation energy, atomic radius, shielding		Standard hydrogen electrode, half-cell, electrode, oxidation, reduction, feasibility, potential difference	Alkylation, acylation, nucleophile, addition, substitution, reduction,
<b>Common Misconceptions</b>	Trends in IE can be pernicky – but if they just write about shielding/number of shells, effective nuclear attraction it's fairly straightforward		$E = E_p - E_n$ . Identify the negative and positive electrodes first Feasible does not mean fast – it just means it can happen. A large $E_a$ may mean it is very slow/negligible

	Y12 AEC	Y12 DHN	Y13 DHN	Y13 KMF
<b>Week 28 (w/b 17<sup>th</sup> Apr)</b>	<p>Lesson 1: 3.2.1. (f) (i) explanation of the term <i>average bond enthalpy</i> (breaking of 1 mol of bonds in gaseous molecules) (ii) explanation of exothermic and endothermic reactions in terms of enthalpy changes associated with the breaking and making of chemical bonds (iii) use of average bond enthalpies to calculate enthalpy changes and related quantities (see also 2.2.2 f)</p> <p>Lesson 2: 3.2.1. (g) Hess' law for construction of enthalpy cycles and calculations to determine indirectly: (i) <b>an enthalpy change of reaction from enthalpy changes of combustion</b> (ii) an enthalpy change of reaction from enthalpy changes of formation (iii) enthalpy changes from unfamiliar enthalpy cycles</p>	<p>Lesson 1: 4.2.3. (c) two-stage synthetic routes for preparing organic compounds.</p> <p>Lesson 2: 4.2.3. (c) two-stage synthetic routes for preparing organic compounds.</p>	<p>Lesson 1: 5.3.1. (e) use of the terms <i>complex ion</i> and <i>coordination number</i> and examples of complexes with: (i) six-fold coordination with an octahedral shape (ii) four-fold coordination with either a planar or tetrahedral shape (see also 2.2.2 g–h)</p> <p>Lesson 2: 5.3.1. (f) types of stereoisomerism shown by complexes, including those associated with bidentate and multidentate ligands: (i) <i>cis-trans</i> isomerism e.g. <math>\text{Pt}(\text{NH}_3)_2\text{Cl}_2</math> (see also 4.1.3 c–d) (ii) optical isomerism e.g. <math>[\text{Ni}(\text{NH}_2\text{CH}_2\text{CH}_2\text{NH}_2)_3]^{2+}</math> (see also 6.2.2 c)</p> <p>(g) use of <i>cis-platin</i> as an anti-cancer drug and its action by binding to DNA preventing cell division</p> <p>Lesson 3: 5.3.1. (h) ligand substitution reactions and the accompanying colour changes in the formation of: (i)</p>	<p>Lesson 1: 6.3.2. (a) analysis of a carbon-13 NMR spectrum of an organic molecule to make predictions about: (i) the number of carbon environments in the molecule (ii) the different types of carbon environment present, from chemical shift values (iii) possible structures for the molecule</p> <p>Lesson 2: 6.3.2. (a) analysis of a carbon-13 NMR spectrum of an organic molecule to make predictions about: (i) the number of carbon environments in the molecule (ii) the different types of carbon environment present, from chemical shift values (iii) possible structures for the molecule</p> <p>Lesson 3: 6.3.2. (a) analysis of a carbon-13 NMR spectrum of an organic molecule to make predictions</p>

	Lesson 3: 3.2.1. (g) Hess' law for construction of enthalpy cycles and calculations to determine indirectly: (i) an enthalpy change of reaction from enthalpy changes of combustion (ii) an enthalpy change of reaction from enthalpy changes of formation (iii) enthalpy changes from unfamiliar enthalpy cycles Lesson 4: 3.2.1. (h) the techniques and procedures used to determine enthalpy changes directly and indirectly.		[Cu(NH <sub>3</sub> ) <sub>4</sub> (H <sub>2</sub> O) <sub>2</sub> ] <sup>2+</sup> and [CuCl <sub>4</sub> ] <sup>2-</sup> from [Cu(H <sub>2</sub> O) <sub>6</sub> ] <sup>2+</sup> (ii) [Cr(NH <sub>3</sub> ) <sub>6</sub> ] <sup>3+</sup> from [Cr(H <sub>2</sub> O) <sub>6</sub> ] <sup>3+</sup> (see also 5.3.1 j) (i) explanation of the biochemical importance of iron in haemoglobin, including ligand substitution involving O <sub>2</sub> and CO Lesson 4: 5.3.1. (j) reactions, including ionic equations, and the accompanying colour changes of aqueous Cu <sup>2+</sup> , Fe <sup>2+</sup> , Fe <sup>3+</sup> , Mn <sup>2+</sup> and Cr <sup>3+</sup> with aqueous sodium hydroxide and aqueous ammonia, including: (i) precipitation reactions (ii) complex formation with excess aqueous sodium hydroxide and aqueous ammonia	about: (i) the number of carbon environments in the molecule (ii) the different types of carbon environment present, from chemical shift values (iii) possible structures for the molecule
Key Words Level 2 Level 3	Enthalpy, lattice enthalpy, enthalpy of formation, enthalpy of combustion, enthalpy of solution, Born-Haber cycle, electron affinity,	Primary, secondary, tertiary, oxidation, combustion, aldehyde, ketone, carboxylic acid, addition, elimination, substitution, hydrolysis Reflux, distillation, liebig condenser, separating funnel	Transition metal, complex, ligand, mono-/bi-/multi-dentate, co-ordination number, dative covalent bond, planar, trigonal, trigonal pyramidal, trigonal bipyramidal, octahedral	Chemical shift, coupling, deuterated solvent, singlet, doublet, triplet, quartet, multiplet, n+1, TMS, spin-spin splitting
Common Misconceptions	Lack of care with – and + during the calculation stage		Pupils will not enjoy the memorisation of colours and colour changes for substitution reactions, but it's on the syllabus...	Depending on the ability, getting into spin-spin coupling can be useful, or just confusing when explaining why certain peak groups are present
Homework	Activelearn task suitable to ability of group	Activelearn task suitable to ability of group.	Activelearn task suitable to ability of group.	Activelearn task suitable to ability of group.
Assessment this half-term	Up to & inc. 3.2.1h	Up to & inc. 4.2.4b	Up to & inc. Paper 1/2/3	Up to & inc. Paper 1/2/3

<b>Week 31</b> <b>(w/b 8<sup>th</sup> May)</b>	<p><u>Lesson 1: 3.2.2.</u> (a) the effect of concentration, including the pressure of gases, on the rate of a reaction, in terms of frequency of collisions</p> <p><u>Lesson 2: 3.2.2.</u> (b) calculation of reaction rate from the gradients of graphs measuring how a physical quantity changes with time</p> <p><u>Lesson 3: 3.2.2.</u> (c) explanation of the role of a catalyst: (i) in increasing reaction rate without being used up by the overall reaction (ii) in allowing a reaction to proceed via a different route with lower activation energy, as shown by enthalpy profile diagrams</p> <p><u>Lesson 4: 3.2.2.</u> (d) (i) explanation of the terms <i>homogeneous</i> and <i>heterogeneous</i> catalysts (ii) explanation that catalysts have great economic importance and benefits for increased sustainability by lowering temperatures and reducing energy demand from combustion of fossil fuels with resulting reduction in CO<sub>2</sub> emissions</p>	<p><u>Lesson 1: 4.2.4.</u> (b) absorption of infrared radiation by atmospheric gases containing C=O, O–H and C–H bonds (e.g. H<sub>2</sub>O, CO<sub>2</sub> and CH<sub>4</sub>), the suspected link to global warming and resulting changes to energy usage</p> <p><u>Lesson 2: 4.2.4.</u> (b) absorption of infrared radiation by atmospheric gases containing C=O, O–H and C–H bonds (e.g. H<sub>2</sub>O, CO<sub>2</sub> and CH<sub>4</sub>), the suspected link to global warming and resulting changes to energy usage</p>	<p><u>Lesson 1: PAG4</u></p> <p><u>Lesson 2: PAG4</u></p> <p><u>Lesson 3: PAG4</u></p> <p><u>Lesson 4: Assessment</u></p>	<p><u>Lesson 1: 6.3.2.</u> (e) deduction of the structures of organic compounds from different analytical data including: (i) elemental analysis (<b>see also 2.1.3 c</b>) (ii) mass spectra (<b>see also 4.2.4 f–g</b>) (iii) IR spectra (<b>see also 4.2.4 d–e</b>) (iv) NMR spectra.</p> <p><u>Lesson 2: 6.3.2.</u> (e) deduction of the structures of organic compounds from different analytical data including: (i) elemental analysis (<b>see also 2.1.3 c</b>) (ii) mass spectra (<b>see also 4.2.4 f–g</b>) (iii) IR spectra (<b>see also 4.2.4 d–e</b>) (iv) NMR spectra.</p> <p><u>Lesson 3: Assessment</u></p>
<b>Key Words</b> <b>Level 2</b> <b>Level 3</b>	Enthalpy, lattice enthalpy, enthalpy of formation, enthalpy of combustion, enthalpy of solution, Born-Haber cycle, electron affinity,	Fragmentation, fragment ion, M peak, M+1 Peak	Transition metal, complex, ligand, mono-/bi-/multi-dentate, co-ordination number, dative covalent bond, planar, trigonal, trigonal pyramidal, trigonal bipyramidal, octahedral, substitution, precipitation, redox	Chemical shift, coupling, deuterated solvent, singlet, doublet, triplet, quartet, multiplet, n+1, TMS, spin-spin splitting
<b>Common Misconceptions</b>	Failing to differentiate between moles and moles per dm <sup>3</sup> .			
<b>Homework</b>	Task suitable to ability of group.	Task suitable to ability of group.	Task suitable to ability of group.	Task suitable to ability of group.
<b>Assessment this half-term</b>	Up to & inc. 3.2.1h	Up to & inc. 4.2.4b	Up to & inc. Paper 1/2/3	Up to & inc. Paper 1/2/3

	Y12 AEC	Y12 DHN
<b>Week 34 (w/b 5<sup>th</sup> Jun)</b>	<u>Lesson 1: 3.2.3. (c)</u> explanation that a catalyst increases the rate of both forward and reverse reactions in an equilibrium by the same amount resulting in an unchanged position of equilibrium	<u>Lesson 1: 4.2.4. (d)</u> interpretations and predictions of an infrared spectrum of familiar or unfamiliar substances using supplied data <u>Lesson 2: 4.2.4. (e)</u> use of infrared spectroscopy to monitor gases causing air pollution (e.g. CO and NO)

	<p><u>Lesson 2: 3.2.3.</u> (d) the techniques and procedures used to investigate changes to the position of equilibrium for changes in concentration and temperature.</p> <p><u>Lesson 3: 3.2.3.</u> (e) explanation of the importance to the chemical industry of a compromise between chemical equilibrium and reaction rate in deciding the operational conditions</p> <p><u>Lesson 4: 3.2.3.</u> (f) expressions for the equilibrium constant, <math>K_c</math>, for homogeneous reactions and calculations of the equilibrium constant, <math>K_c</math>, from provided equilibrium concentrations</p>	from car emissions) and in modern breathalysers to measure ethanol in the breath
<b>Key Words</b> <b>Level 2</b> <b>Level 3</b>	Boltzmann, gradient, tangent, collision theory, homogeneous, heterogeneous, catalyst, activation energy	Fragmentation, fragment ion, M peak, M+1 Peak
<b>Common Misconceptions</b>	Construction of $K_c$ expressions, putting product under reactant, forgetting stoichiometry	
<b>Homework</b>	Activelearn task suitable to ability of group	Activelearn task suitable to ability of group.
